Using meeting times and student sports days.

We ended up using about 8 hours:

- Working in groups of 2-3 reading and editing the CheSSE package.
- Looking through the material and reviewing it as a whole team.
- Finding consensus and finalizing language (still in progress).

Implementation

- Adopting CheSSE guidelines and routines in our local group
- Reworked local Guidelines in accordance with recommendations from CheSSE
- Producing the documentation both physical and digital

Going through the work flow and routines of the labs and teaching facilities

- SV_Checklist-for-fume-cupboards 2023-02-... den 15 februari
- SV_Checklist-for-inspecting-stored-chemic... den 15 februari

Clear contents for student lab kit Now we need

Inventory (Where are we know?)

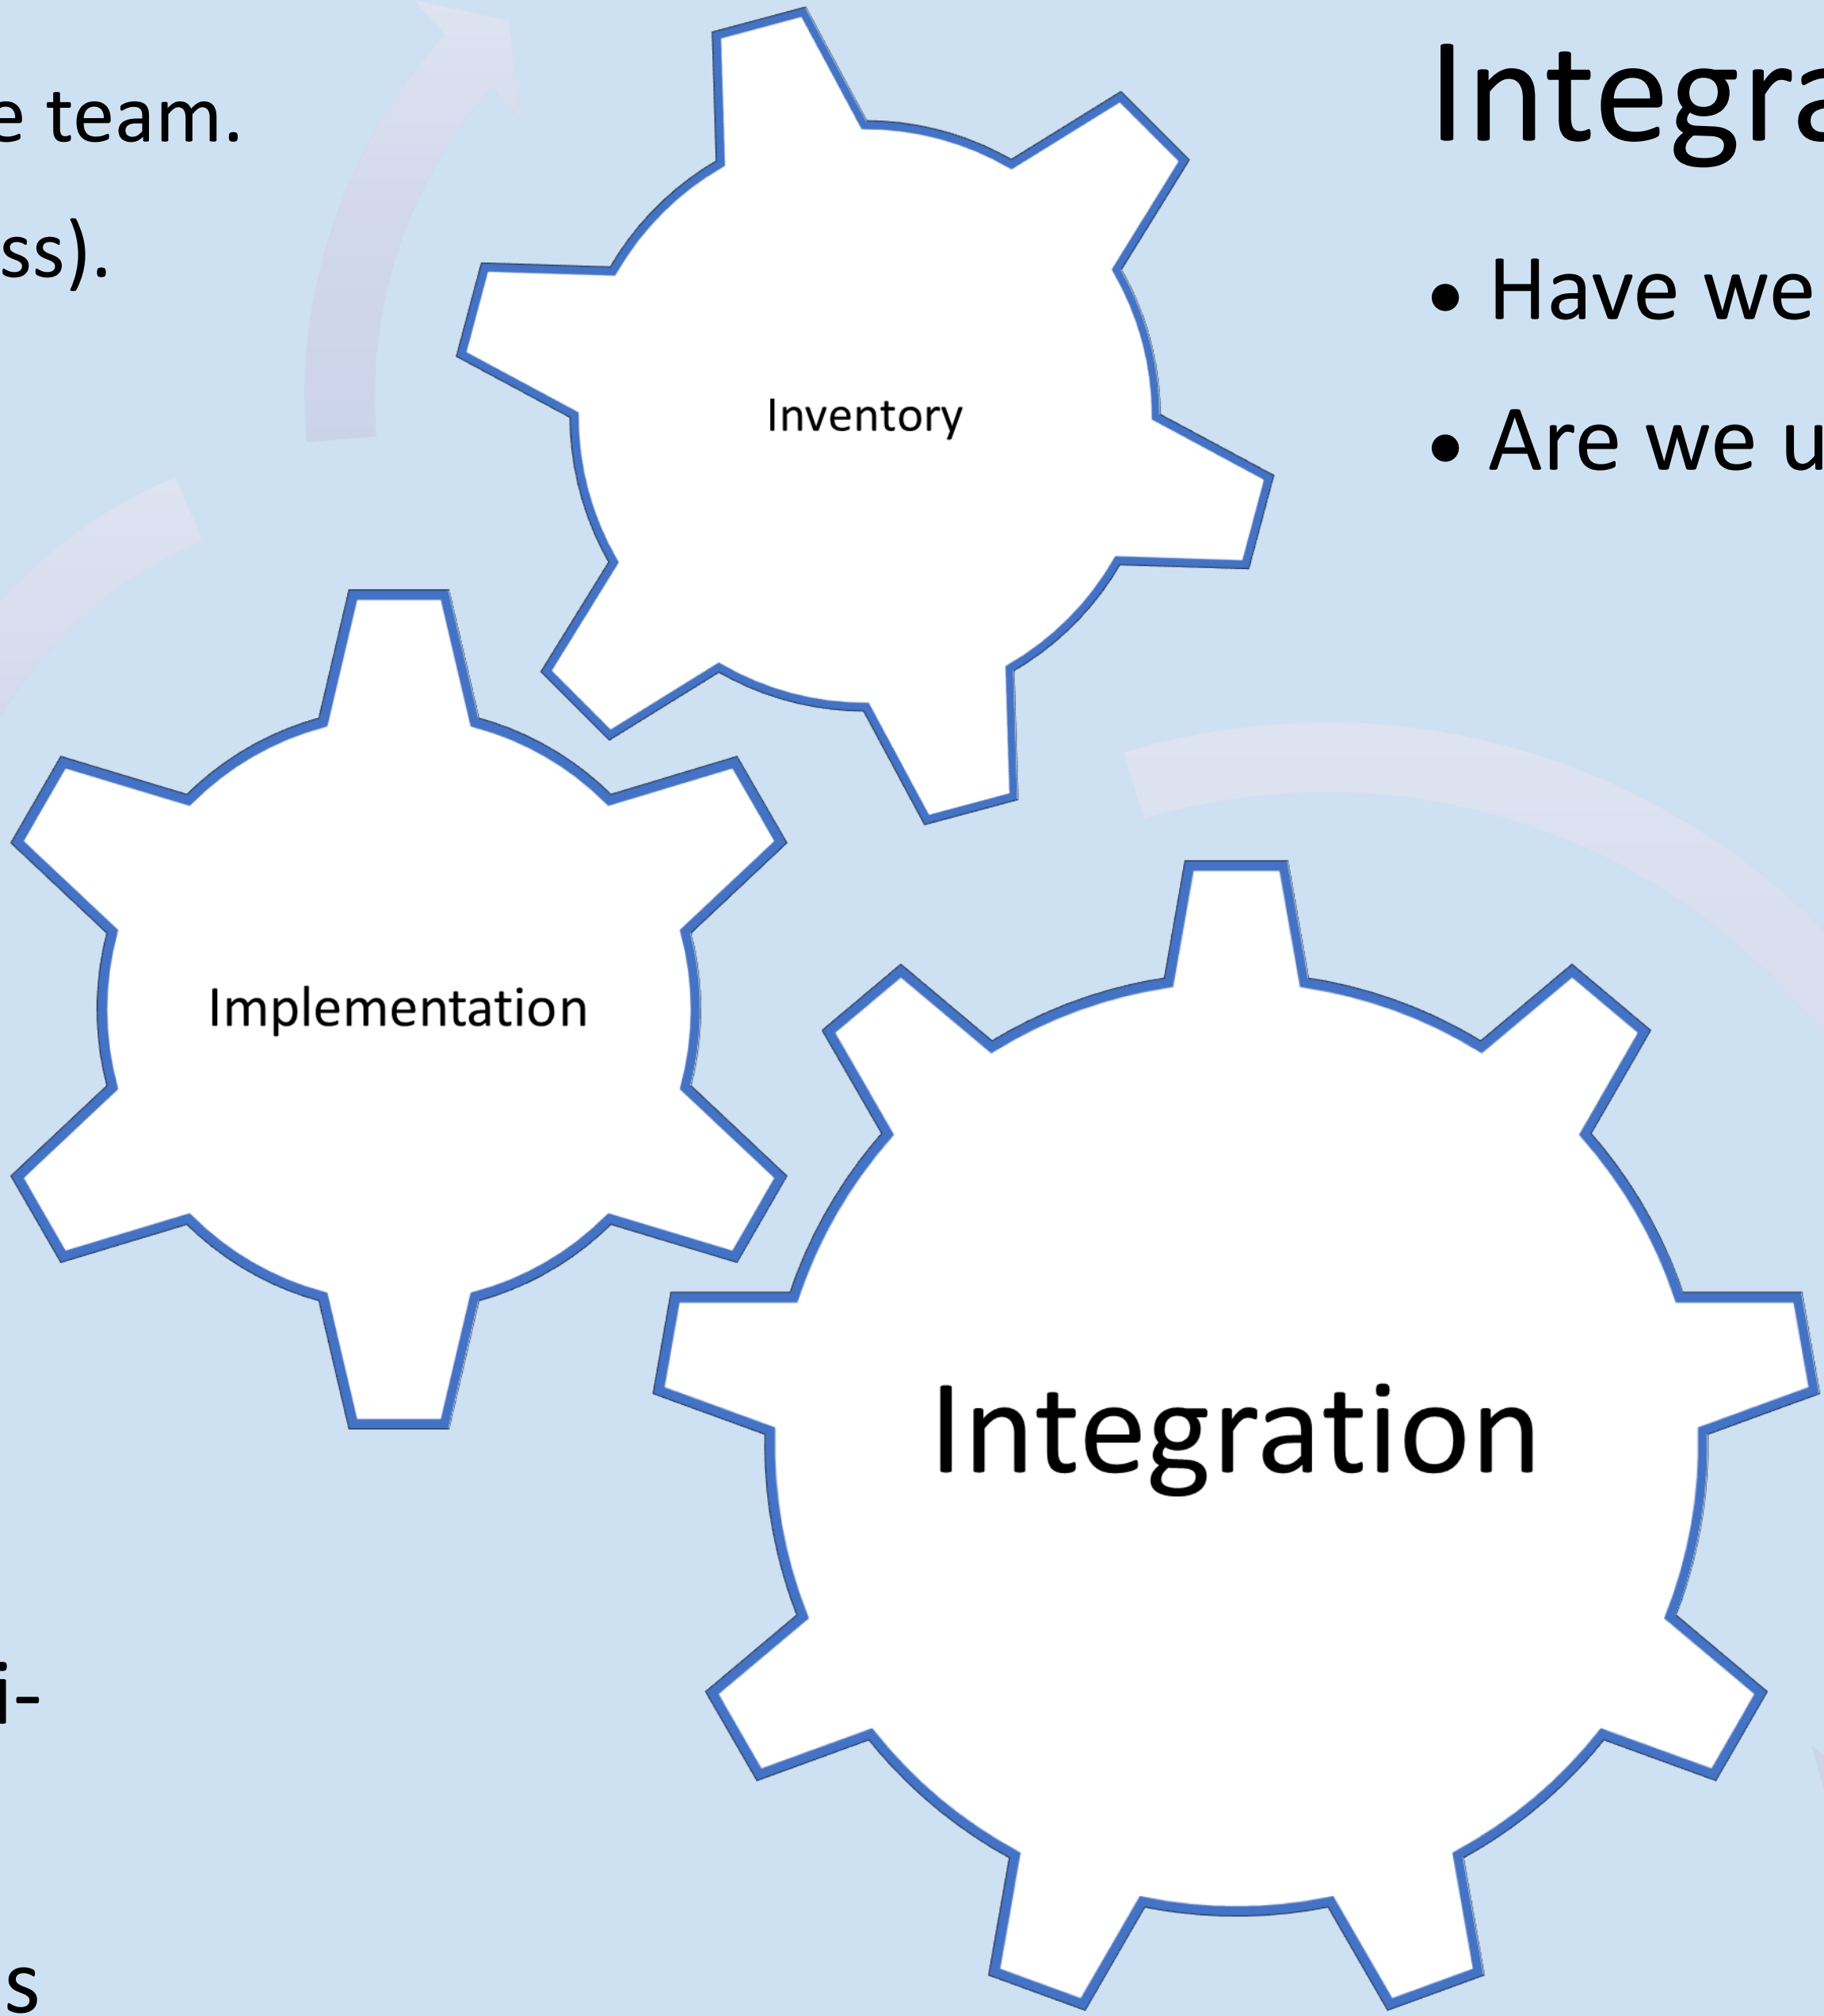

- Taking inventory of previous routines and documentation
- Checking and making an inventory of current (old) routines.
- Acquainting ourselves with the routines and checklists from CheSSE
- Thorough reassessment and review of local safety routines

An unlocked lock
Telephone numbers that need to be up-

Integration into local practice

- Have we understood the new guidelines and routines?
- Are we using them?

Example of how proper labeling is being adopted.
Previously these containers with only numbers could be found in several cupboards

New routines and guidelines for chemical waste management..

As part of our commitment to chemical safety implementing a circular calendar with actions when routines are realized and actions performed.
